

GHK-Cu Topical Cream

Generic Name: GHK-Cu (Copper Tripeptide-1)

Drug Class: Peptide-based Therapeutic, Anti-Aging Agent, Skin Regenerative Agent

1. Indications and Usage

GHK-Cu topical cream is used primarily for:

- **Skin Regeneration:** Enhances wound healing, tissue repair, and skin rejuvenation.
- **Anti-aging:** Reduces the appearance of fine lines and wrinkles, improves skin elasticity, and promotes skin firmness.
- **Skin Repair:** Effective for treating skin conditions like scars, hyperpigmentation, and other signs of skin aging or environmental damage.

GHK-Cu is a naturally occurring peptide in human plasma that has been shown to have various beneficial effects on skin health due to its interaction with copper ions, promoting collagen production, enhancing skin barrier function, and supporting cell regeneration.

2. Mechanism of Action

GHK-Cu is a naturally occurring copper peptide that binds to copper ions, allowing it to regulate gene expression and promote the repair of tissues. This peptide works through several mechanisms:

- **Collagen Synthesis:** Stimulates collagen and elastin production, improving skin elasticity and firmness.
-

- **Wound Healing:** Enhances fibroblast proliferation and migration, which aids in wound repair and skin regeneration.
 - **Anti-inflammatory:** GHK-Cu has anti-inflammatory properties that help in reducing skin irritation and promoting healthy skin barrier function.
 - **Antioxidant Activity:** Helps neutralize free radicals, thus reducing oxidative stress in the skin.
-

3. Dosage and Administration

- **Topical Application:** Apply a thin layer of GHK-Cu topical cream to the desired area once or twice daily.
 - **Instructions for Use:**
 1. Cleanse and dry the skin before application.
 2. Gently massage a small amount of the cream into the skin until fully absorbed.
 3. Avoid contact with eyes and mucous membranes.
 - **Duration of Treatment:** Typically recommended for long-term use to see maximal benefits in terms of anti-aging and skin rejuvenation. Some users report noticeable improvements within 4-6 weeks of consistent application.
-

4. Contraindications

- **Hypersensitivity or Allergic Reactions:** Do not use GHK-Cu cream if there is a known allergy to copper peptides or any component of the formulation.
 - **Active Skin Infections:** Avoid use on areas with active skin infections, open wounds, or severe irritation unless otherwise directed by a healthcare provider.

5. Warnings and Precautions

- **Skin Sensitivity:** Some individuals may experience mild irritation, redness, or tingling upon initial use. If severe irritation occurs, discontinue use and consult a healthcare provider.
 - **Pregnancy and Lactation:** There is limited data on the safety of GHK-Cu in pregnant or breastfeeding women. Consult a healthcare professional before use in these populations.
 - **Not for Use in Children:** Safety and efficacy have not been established for pediatric populations.
-

6. Adverse Reactions

- **Common Side Effects:**
 - Mild irritation or redness
 - Dryness or peeling
 - Itching or burning sensation at the site of application
- **Rare but Serious Side Effects:**
 - Severe allergic reactions (rash, hives, swelling)
 - Excessive irritation or pain at the site of application

If any severe or persistent side effects occur, users should discontinue the product and consult a healthcare provider.

7. Drug Interactions

Currently, there are no known significant drug interactions with GHK-Cu topical cream. However, it is advisable to avoid using it with other strong topical treatments, such as harsh exfoliants or products containing strong acids (like glycolic acid or salicylic acid), unless otherwise directed by a healthcare professional.

8. Overdose

An overdose is unlikely with topical use. If an excessive amount of the cream is applied, the main concern would be increased irritation or dryness. In case of excessive application, wash the area thoroughly with water and discontinue use. Seek medical attention if irritation is severe.

9. Pharmacokinetics

- **Absorption:** GHK-Cu is a small peptide that is absorbed through the skin after topical application. However, systemic absorption is minimal due to the size and composition of the peptide.
 - **Metabolism:** GHK-Cu peptides are naturally broken down in the skin, with copper ions being utilized in the formation of collagen and elastin.
 - **Excretion:** Excretion of GHK-Cu is not well studied, though it is thought to be metabolized locally and excreted through normal metabolic pathways.
-

10. Clinical Studies and Efficacy

- **Wound Healing:** Clinical studies have shown that GHK-Cu significantly accelerates wound healing by promoting collagen production and increasing fibroblast activity.
 - **Anti-aging:** A study published in the *Journal of Investigative Dermatology* found that GHK-Cu significantly improved skin appearance, reduced fine lines, and promoted skin
-

elasticity in subjects after 12 weeks of daily use.

- **Anti-inflammatory Effects:** Studies have demonstrated that GHK-Cu can reduce inflammation and enhance the skin's natural repair processes, which may help with conditions like acne, eczema, and rosacea.
-

11. Storage

- Store at room temperature (20-25°C / 68-77°F).
 - Keep the cream tightly sealed and away from direct sunlight and excessive heat.
 - Do not freeze.
-

12. Patient Counseling Information

- **Application Tips:** Use sparingly and avoid the eyes and mucous membranes. If irritation occurs, reduce the frequency of application or discontinue use.
 - **Consistency:** For best results, use the product consistently as directed. Visible changes may take 4-6 weeks of regular use.
 - **Patch Test:** If you have sensitive skin, perform a patch test before using the product on larger areas.

13. Conclusion

GHK-Cu topical cream is a powerful agent in skin regeneration and anti-aging. By stimulating collagen production, improving skin elasticity, and promoting wound healing, it can significantly enhance the appearance and health of the skin. However, it is important to follow the usage instructions and be mindful of any irritation or allergic reactions. Always consult a healthcare provider before beginning any new skincare treatment, especially if you have preexisting skin conditions or are pregnant or breastfeeding.

For Prescribed Use Only

This compounded preparation is intended for use only under the direct supervision of a licensed healthcare provider. It should be dispensed only to the patient for whom it was prescribed and not transferred or administered to others.
